DMARC Policy

Effective November 5, 2026

DMARC is an email security setting for iqproductionz.com. It tells receiving mail servers what to do with messages that claim to come from our domain but fail security checks, which helps stop people from impersonating us. This is a technical record, not a customer policy, so it does not belong at checkout.

Current record

Checked on November 5, 2026. This record is already active.

> **Host:** `_dmarc.iqproductionz.com`
> **Type:** TXT
> **Value:** `v=DMARC1; p=none; rua=mailto:3c5565e578344acaa7dcbeaecd080b1b@dmarc-reports.cloudflare.net`

What each part means

Setting	Meaning
`p=none`	Monitoring mode. Failed messages are reported, but they are still delivered.
`rua=mailto:...`	Sends daily summary reports to Cloudflare's DMARC reports.

Related records

Item	Current status
SPF	`v=spf1 include:_spf-us.ionos.com ~all`
DKIM	Not confirmed. It is set per sending service, so check it in IONOS.

Our policy

- Stay at `p=none` while reviewing DMARC reports in Cloudflare.
- Confirm every service sending as @iqproductionz.com passes SPF or DKIM.
- Move to `p=quarantine`, then `p=reject`, only after the reports show legitimate mail passing.
